
2. **Calculator**: You will need a graphing calculator, preferably a TI-83 or TI-83Plus.

3. **I.D.**: A TCC photo I.D. is required for tests and the final exam.

4. **Solutions Manual**: I strongly suggest that you purchase the solutions manual, as it gives step-by-step solutions of the odd numbered exercises. The solutions manual is not required. You will find the answers to any even numbered exercises assigned on the lesson page for which they are assigned.

---

**SUGGESTED TIME SCHEDULE**

You have twenty weeks to complete the course from the day of your registration. If you need a final grade by the end of the term in which you registered for this course, you must complete all required work, including the final exam, one week prior to regular exam week for that semester. The only deadline for SPI is your twenty weeks completion requirement. If you have a personal deadline, such as transferring your grade to another school, remember to complete all required work one week prior to regular exam week. If you need your grade in a hurry, you need to notify your instructor several weeks in advance.

The following is a suggested time table for proceeding through this course.

**UNIT I:** 4 weeks

**UNIT II:** 5 weeks

**UNIT III:** 4 weeks

**UNIT IV:** 5 weeks

Prepare and complete the FINAL EXAM: 2 weeks
